The mouse made a home in the leaves, the children liked to pet the calves, the woman fed the goose half of the food, the child liked the geese, the woman chased the mice away. The calf jumped when the leaf fell on his nose. "The fish ate both halves of the green plant," said Ally. Find a piece of land with common surface area.

This school handwriting sample came from a precious 9 year old 3rd grade boy named Aaron. Notice how well he writes on the lines and his ease of control.

Now turn this sheet over to see what Aaron's handwriting was like just a couple of months before he wrote the above sample.

What changed to make this improvement possible?

Aaron came in for *Brain Integration Treatment* to help him resolve a number of problems, including his Sensory Processing related difficulties (eye/hand/muscle control) that compromised his ability to write well. As we opened up the blocked neurological pathways in his brain required for this activity, his handwriting became much easier to accomplish.

This kind of dramatic improvement is typical of what *Brain Integration Treatment* can achieve. Contact us today to discover how we can help you and your family.

We take the stress out of learning!

Aaron #4

she stopped
baking, and
dropped the
letter.

"Won't you go
swimming with
that pretty
girl? Asked
Adam.

I didn't see
her leaving
for the summer.
